& Warehouse Facilities

PRODUCT
TechGuard® Connect Lockers

APPLICATION

Many manufacturing companies are putting technology in the hands of their staff to automate manual data capture points in order to increase efficiencies and incorporate critical information into their overall supply chain management systems.

CHALLENGE

Valuable production time is wasted as employees search for an available device and accessory that is fully charged and in working order at the beginning of each shift. With no designated spot or accountability for their devices, employees aren't always conscientious at charging electronic devices at the end of their shift.

SOLUTION

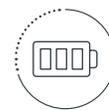

TechGuard Connect Lockers store, charge and manage company's electronic assets, preparing the devices and accessories for the next shift. Employees are assigned a specific locker bay which is accessed via passcode or RFID to retrieve the device. When their shift is completed, they access the bay to store and charge the device.

In conjunction with Bretford Connect™, a cloud-based centralized management portal, data captures of check-in/check-out help manage the devices to ensure they are charged and ready to go for the next users.

WHY TECHGUARD CONNECT LOCKERS?

Save a minimum of 15 minutes per employee, per day, of lost production time. In a facility with 2,000 employees covering 3 shifts, that amounts to 500 hours per day and over 175,000 hours annually, saving over \$2.6M in lost production time wages.

Makes employees accountable for devices and accessories that have an average value of \$2,000 per set, to be stored, charged and ready for the next shift.

POWER EVERYWHERE. THAT'S OUR CHARGE.
